

EFFICAX[®] Keeps Herbicides in the Kill Zone

- Early spring and fall application times
- EFFICAX[®] functions to hold soil-active herbicides in place longer by reducing herbicide movement after application
- Better, more consistent weed control by increasing the amount of time the residual herbicide remains in the weed germination/emergence zone*

EFFICAX IMPROVES RESIDUAL HERBICIDE ACTIVITY OF SOIL-APPLIED PENDIMETHALIN

In the top line, note how the addition of **EFFICAX** to pendimethalin holds back germination of common purslane over a longer period of time than pendimethalin alone. For example: 48 days after spray the herbicide alone has only controlled 83% of the purslane, but pendimethalin + **EFFICAX** is still controlling 95% of the purslane.

EFFICAX BENEFITS

Greater herbicide soil retention leading to improved residual weed control

Increased soil deposition creating better coverage

Excellent soil absorption and adhesion properties

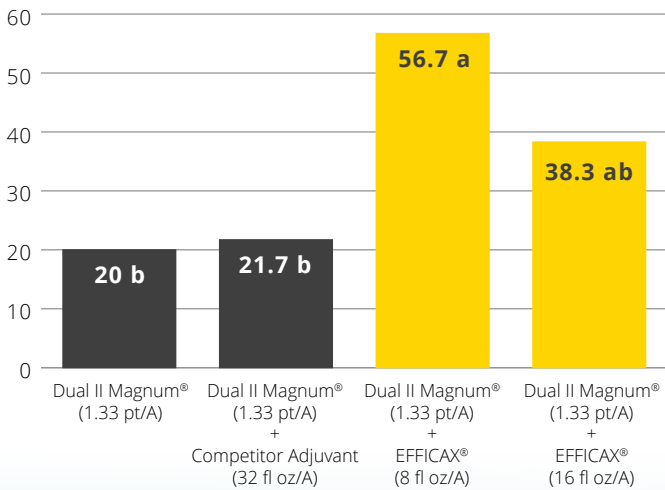

Excellent tank mix compatibility

*EFFICAX has no effect on UV degradation or half-life of the chemistry. Refer to manufacturer's label for more details.

EFFICAX HOLDS YOUR INVESTMENT WHERE IT IS NEEDED

EFFICAX® utilizes proprietary technology and is designed for customers who want to optimize residual activity from their pre-plant/preemergent chemistry. EFFICAX helps to increase spray deposits of the spray material, allowing for better coverage and adhesion to soil particles, resulting in enhanced control of early season weed pressures. EFFICAX is labeled for use in agriculture, forestry, golf course, industrial, non-cropland, roadside, turf, and ornamental.

Percent Control of Kochia at 36 DAA

Means followed by same letter do not significantly differ and means from different evaluations (different dates) do not correspond (P=.05, LSD).

PDF185030CO01

Residual herbicide is optimized with the addition of 8 fl oz/ac of EFFICAX

Without EFFICAX, soil-applied herbicides can leach quickly through the soil profile, allowing for weeds to germinate despite being treated.

EFFICAX helps soil-applied herbicides stay in the upper portion of the soil, allowing for better, more consistent control of early season weeds.
