

## **CYNDER<sup>™</sup> Water Conditioning Agent, Activator**

**CYNDER** is a water conditioning alternative to ammonium sulfate. **CYNDER** is designed to condition the water, effectively mitigating the harsh effects of hard water that can be antagonistic to the spray mix solution. **CYNDER** has the additional benefit of a nonionic surfactant that helps break the surface tension of the spray droplet, allowing for better spreading and wetting of the spray materials onto the leaf tissue.

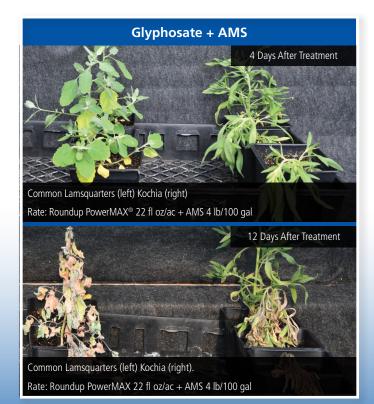

With its unique blend of water conditioners plus a proprietary surfactant, **CYNDER** increases the uptake of the active ingredient(s), allowing for a quicker burndown of the targeted weeds. **CYNDER** is ideal for use with weak acid herbicides such as glyphosate, paraquat, dicamba and 2,4-D formulations. The recommended labeled rates for **CYNDER** are 1–4 quarts/100. Rates can vary depending on the hardness of water used in the spray solution.

## **Features:**

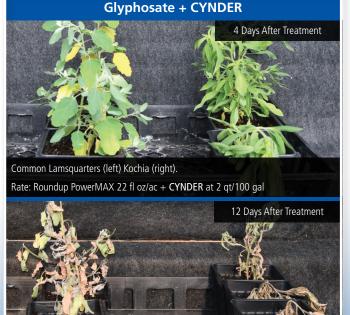

- · Water conditioning
- · Nonionic surfactant
- · AMADS/Water Conditioner Blend
- · NPE Free

## **Benefits:**

- · Minimizes antagonistic effects of hard water
- · Uniform coverage onto plant surface
- · Increased absorption of the active ingredients
- · Consistent performance on tough weed species

Trial Number: PDF185019C005

Common Lamsquarters (left) Kochia (right). Rate: Roundup PowerMAX 22 fl oz/ac + CYNDER at 2 qt/100 gal
